(a) A: opened channel, charge defect
Ocelot Fig. 18b (A4-S4)
defect + smooth channel (s = 5)
smooth channel alone
smooth channel, s = 1
ΔP_g after 800 ns
$|\alpha|^2$
(b) B: critical-current defect
Ocelot Fig. 18b (A4-S4)
defect + smooth channel (s = 9)
smooth channel alone
smooth channel, s = 1
ΔP_g after 800 ns
$|\alpha|^2$
(c) the smooth channel in F9
idle-referenced (s = 1)
A, reference
A, binomial noise
A, |α|² >= 2 only
B, reference
B, binomial noise
B, |α|² >= 2 only
posterior density
strength of the smooth photon-stimulated f→g channel, s
