(a) one fault, $|\alpha|^2 = 4$
P(cat flip | fault)
A1
A2
A3
A4
unheralded
heralded
$f \to e$
direct $f \to g$
double decay
heating (50 mK)
(b) A4: S4, S5
odd-flip probability per measurement
direct $f \to g$
double decay $f \to e \to g$
deterministic (Kerr, $\chi(n)$)
$|\alpha|^2$
(c) direct over double decay
direct $f \to g$ / double decay
$\lambda = 1/3$
$\lambda = 1$ (idle-referenced)
$\lambda = 3$
$|\alpha|^2$
