Total parity and dressing: one-photon f→g is open for equal-parity ancilla levels;
the qubit ancilla's e→g has no such channel at any photon number
dressing-opened f→g branching per photon, ρ
photons in the code mode during the gate, n̄
f→g / f→e = 0.1
f→g / f→e = 0.01
f→g / f→e = 0.001
Ocelot pairs at the CX² 'on' point (exact ladders)
GKP A (Sivak 2023): big ECD displacement, if the ancilla used f
GKP B (Eickbusch 2022): big ECD displacement, if the ancilla used f
